CELLULAR AGING · VIVIX+™

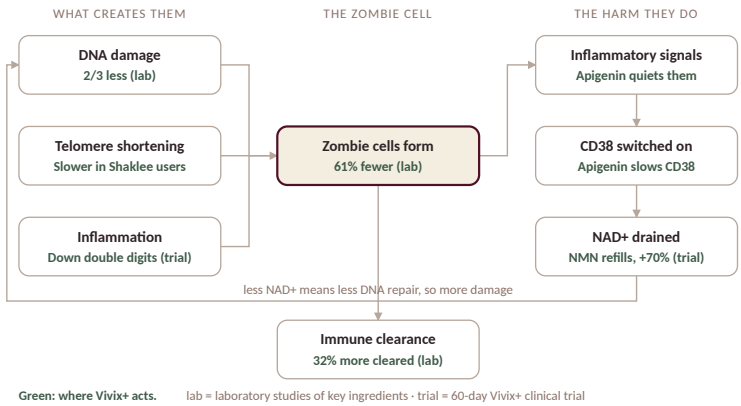

The Zombie Cell Problem

Why aging speeds up, and what your cells need.

Shared by Suzanne Chaney

As we age, damaged cells called zombie cells stop working but refuse to die. They send out inflammation, harm the cells around them, and drain NAD+, the molecule your cells run on.[1,2] Aging speeds up when they build up faster than your immune system can clear them.[3]

The main idea comes from the widely shared video *The REAL Reason Your Body Ages FASTER After 75* (Dr. Aven Royce channel on YouTube), and it is grounded in research from the Buck Institute and Mayo Clinic.

Green: where Vivix+ acts. lab = laboratory studies of key ingredients · trial = 60-day Vivix+ clinical trial

How Vivix+™ helps

Fewer zombie cells LABORATORY

61% fewer formed and 32% more cleared in laboratory studies of key ingredients.[6]

Calmer signals, protected NAD+ RESEARCH

Apigenin quiets zombie-cell signals[4] and slows CD38, the enzyme that destroys NAD+.[5] NMN refills it: 70% more NAD+ in 24 hours.[6]

Proven in people CLINICAL TRIAL

In 60 days: inflammation down by double digits and VO_2 max up 3.2 points, about 8 years of decline reversed.[6]

Start with Vivix+™

Order two bottles and you become a Shaklee member automatically: $96 a bottle, free shipping, and a 100% money-back guarantee.
